v1.8.1 macOS · Windows Runs in Claude Code

You do the talking and the deciding. aaaai-editor does the editing.

It's a complete editing workflow for talking-head videos: trimming pauses, captions, on-screen cards, music and sound effects, loudness, thumbnails, and frame-by-frame checks. No editing software to learn, no commands to memorize. Just type `/aaaai-editor` in Claude Code and tell it what you want in plain words.

YOU TYPE IN CLAUDE CODE

```
/aaaai-editor Edit ~/Movies/raw/0921.mp4 into a 60-second vertical video with Chinese-English captions, and open with the strongest line as a teaser
```

Easiest way Don't feel like writing anything? Just type `/aaaai-editor edit my video`. It will ask you to drag your video into the window, then walk you through what you want, one question at a time.

Step 1

Drop in footage, say what you need

One sentence works, or fill in the prompt template.

Step 2

Answer a few questions

Style, music, captions. It shows you a comparison image first.

Step 3

Watch the preview, say what to change

The final video and thumbnail are made only once you're happy.

01 · HIGHLIGHTS

What it can do for you

It's not about having lots of features. It's that every step is checked for you: cuts wait for words to finish, captions match the actual voice, cards stay off your face,

and loudness hits platform standards.

Auto rough cut that never clips words

It cuts out silent gaps, waits for each word to trail off before cutting, and starts each segment just before you speak. Restarts and "um/uh" moments are listed for you. Nothing is deleted until you say yes.

Captions matched to your real voice

Each line lines up with the exact moment it's spoken. Chinese, Chinese-English, or original language plus Chinese translation. Keywords get highlighted. If you sit low in the frame, captions move below your chin so they don't cover your face.

Hook viewers in the first 3 seconds

It copies the strongest line in your video to the very start as a teaser. Not sure which line? It scores lines on numbers, contrast, and questions, and suggests 3.

20+ card types that avoid your face

Title cards, animated stats, lists, quotes, comparisons, name tags, chapters, and more. Once they land, they "breathe" gently, and key cards give a quick flash. If you sit high in the frame, cards move out of the way of your eyes.

Card takeover: a full layout for showing proof

The video shrinks into a card while your head pops out of the frame. Above it go proof screenshots, workflow steps, and a call to action, ending on a "comment this keyword" prompt. Great for showing earnings or results.

Audio, all in one go

Noise reduction (you hear three levels first), music that ducks automatically under your voice, 7 sound effects (coin, pop, whoosh…), and final loudness locked to −14 LUFS (the standard across platforms).

Three sources for B-roll

Your own footage is best. It can also find free stock footage (Pexels) or generate clips with AI. Before generating, it always gives you a price quote and only spends money once you agree. Default cap is $2 per project.

Image cards: turn cards into posts

The stat, list, and quote cards from your video can be exported as still images (1080×1350 by default). Add a caption and you have a Xiaohongshu or Instagram carousel post that drives traffic to and from your video. Just say "make image cards."

Every style has its own typography

Each of the 9 styles has its own font personality: bold headings, wide-spaced uppercase labels, monospaced numbers. Backgrounds have a top highlight and soft shadow. Units on stat cards are a size smaller, and you can add a bar showing the amount.

It checks its own work before delivery

It grabs frames at each card's timing to check them, runs a caption timing check, and checks that the thumbnail respects a 15% safe zone. It won't say "done" until it has looked at the actual frames.

Write the posts right after editing

Hand it off to the Content Pipeline: it writes captions and makes images for the platforms you pick (Xiaohongshu, Douyin, X, Instagram, Bilibili…), bundles them into a ready-to-post package, and remembers each client's brand voice. You press "post" yourself.

Fast and safe

It only decodes the parts it needs, so a 60-second video previews in about 30 seconds. Your original footage is never deleted, changed, or moved. API keys are stored in the Mac Keychain and only sent to official addresses.

02 · SETUP

Before you start

A computer

Mac or Windows (see requirements below). For background removal, Mac uses its built-in Apple Vision and Windows uses Google MediaPipe. Both are free and work offline.

Claude Code

Desktop app or terminal, either works. ChatGPT Codex is also supported. On Windows, install Git first (the installer can do it for you).

aaaai-editor installed

Mac: double-click "双击安装.command" ("double-click to install"). Windows: double-click "Install-Windows.cmd". You can also install it as a Claude Code plugin. The first install downloads about 3GB.

A video clip

Vertical phone footage works best: you centered in the frame, upper body fully visible, clear audio, quiet background.

Computer requirements

	MAC	WINDOWS
OS	macOS 13 Ventura or later	Windows 10 (22H2) or Windows 11, 64-bit
Processor	**Apple M series (M1 or later)**. It installs on Intel Macs, but transcription, background removal, and rendering are much slower. Not recommended	A 64-bit Intel/AMD processor from the last 5 years. With an NVIDIA, Intel, or AMD graphics card, you can turn on hardware acceleration for rendering. Windows on ARM isn't supported yet
Memory	8GB minimum, **16GB recommended**	8GB minimum, **16GB recommended**
Storage	At least **20GB** free (about 3GB for tools and speech models, the rest for footage and exports; one minute of 4K phone footage is about 0.5GB)	
Internet	About 3GB to download during install. After that, editing works offline (only B-roll stock footage, AI generation, and Content Pipeline research need a connection)	
How to check your computer	Apple menu (top left) › "About This Mac": if the chip starts with Apple M, you're good	"Settings › System › About": check that "System type" is 64-bit, and how much memory you have

WINDOWS The Windows version is new. It follows the same workflow as the Mac version but still needs testing on more Windows PCs. If you run into a problem, send Claude a screenshot and it will help you troubleshoot.

Installation steps

1

Unzip the package

Double-click `aaaai-editor-v*.zip` to unzip it.

2

Double-click "双击安装.command"

Follow the prompts step by step (press Enter to agree). It uses Homebrew to install FFmpeg, whisper, and Python, and asks you before each one. Installing Homebrew needs your Mac login password.

3

If macOS blocks it

If you see "can't be opened" or "developer cannot be verified," open "System Settings › Privacy & Security," scroll down, click "Open Anyway," then double-click the file again.

4

Background removal (optional)

The installer asks whether to install Apple's Xcode Command Line Tools. You need them for text-behind-you effects and card takeovers.

5

Check the health report

Once everything shows ✅, you're ready. Type `/aaaai-editor` in Claude Code.

Full details (installer options, keys, MCP, updates, uninstalling, FAQ): `docs/安装指南-Mac.md` in the package.

1

Extract All

Right-click the zip › "Extract All." Don't double-click inside the zip directly, or the installer won't find its other files.

2

Double-click "Install-Windows.cmd"

Follow the prompts step by step (type y or press Enter to agree). It uses Windows' built-in winget to install Python, FFmpeg, and Git, and downloads whisper, the speech model, and the MediaPipe segmentation model from official sources. It asks you before each one.

3

If Windows blocks it

If a blue "Windows protected your PC" screen appears, click "More info" › "Run anyway." If it says "winget not found," install "App Installer" from the Microsoft Store.

4

Install Claude Code

Download the Windows version from claude.ai/download. It needs Git (already installed in step 2). After installing, fully close Claude Code and reopen it.

5

Check the health report

Once everything shows ✅, you're ready. Type `/aaaai-editor` in Claude Code. Finished videos are in File Explorer under "Videos › aaaai-editor › 成品 (exports)."

Full details (installer options, keys, MCP, updates, uninstalling, FAQ): `docs/安装指南-Windows.md` in the package.

TIP Right after installing, just tell Claude "check if aaaai-editor is installed correctly." It runs a health check. All ✅ means you're good to go.

It's free Editing, captions, cards, music, sound effects, loudness, and thumbnails are all free. The only thing that might cost money is AI-generated B-roll, and it always gives you a quote and asks first.

Your first edit, start to finish

We'll use a 2-minute talking-head video shot on a phone. Each step shows "what you do" and "what it does," so you won't get lost.

01

Get your footage ready About 1 min

YOU DO

- Put your video anywhere you can find it (for example, your Movies folder).
- Put any photos, screenshots, logos, or your own B-roll in the same folder. You'll tell it where in a moment.

IT DOES

- Creates a new project in "Movies › aaaai-editor." Your original footage is only read, never moved or changed.

02

Say what you want 30 sec

Type `/aaaai-editor` in Claude Code, followed by one sentence. Want to be more detailed? Use the prompt template in the next chapter.

```
/aaaai-editor edit my video
```

That's the shortest version. It will ask you to drag your video into the window, then ask questions one at a time. The more you tell it up front, the less back-and-forth:

```
/aaaai-editor Edit ~/Movies/raw/0921.mp4 into a vertical short with Chinese-English captions
```

TIP Drag the video file from Finder straight into the Claude Code input box, and the path fills in automatically. No typing needed.

03 Answer three kickoff questions 1 min

IT ASKS

- **Style**: it sends you a style comparison image first.
- **Music**: it suggests 1–2 of its 7 original built-in tracks, or you can use your own music, or skip music.
- **Captions**: Chinese / Chinese-English / none (for English videos: original language / with Chinese translation).
- If your footage is horizontal, it also asks: keep it horizontal, or crop to vertical?

YOU DO

- Pick one. Not sure? Pick the one marked "Recommended."
- Next time, say "same as last time" to reuse your previous settings.

04 Check the captions 3–5 min · The most important step

IT DOES

- Turns speech into text, fixes common typos, and matches each line to your real voice.
- For names, brands, or coin names it isn't sure about, it clips that bit so you can listen.
- Gives you a roughly one-minute caption preview to check timing.

YOU DO

- Fix any typos (especially names and terms).
- For bilingual captions, check that the English sounds natural.
- Tell it which words to highlight, like brand names or key numbers.

TIP The sooner you lock the captions, the easier everything else is. Card timing is based on the captions.

05

Clean it up, pick the opener 2 min

IT DOES

- Lists every "um/uh" and every restart (it lists them but doesn't delete them).
- Suggests 3 lines that would work as an opener.

YOU DO

- Say "delete all" or "delete 1 and 3."
- Pick one line as the opening teaser, or say "no teaser."

06

Add cards, watch the preview 5–10 min · May take a few rounds

IT DOES

- First writes one sentence on "what viewers should remember," then lays out cards to match the content (one idea per card).
- Renders a half-resolution preview and grabs frames to check that nothing covers your face or overflows a card.
- Sends you the preview file and reveals it in Finder.

YOU DO

- Just say what to change: "The card at 0:20 stays up too long," "Switch the list to a numbered card," "Add a name tag here."
- Move on once you're happy.

Heads up The preview `final_preview.mp4` is only for checking layout. It's half quality and **not the final video**.

Want to do it yourself? Say "open the editor," and Claude opens **Studio** alongside the chat. Like editing software, it has a preview, a properties panel, and a multi-track timeline. Drag cards and captions to change their timing and length, and edit any text or number. Delete a sentence in the "Transcript" and that part gets cut, with later cards shifting forward automatically. "Check-up" marks timing issues, captions that are too long, and cards covering your face as red dots. "Render this section" shows you the real final frames in seconds. Changes save automatically, and anything you ask Claude to change in chat syncs over too, so neither side overwrites the other. Studio only opens on your own computer.

07 Listen to the audio 2 min

IT PLAYS YOU

- **Music A/B**: the same section as MP3s at three volume levels.
- **Noise reduction A/B** (when there's AC or fan noise): original / standard / strong. Standard is on by default.
- **Sound effects**: only added if you ask for them. It plays them for you during the preview.

YOU DO

- Pick one: "music option two," "use strong noise reduction."

08 Export the video and thumbnail A few min (depends on length)

IT DOES

- Renders the final video: loudness at −14 LUFS, true peak no higher than −1 dB.
- Grabs frames from the final video to check again, and runs a caption timing check.
- Gives you a sheet of thumbnail candidate frames (clean shots from the original, no captions) and recommends a few where you're looking at the camera.
- Makes the thumbnail (vertical 1080×1920 and 1080×1350; horizontal videos get 1920×1080): small label, big title, third line, and your account name, with a dark shadow behind the text. It checks that text stays in the safe zone and off your face.
- Copies the video and thumbnail to "Movies › aaaai-editor › 成品."

YOU DO

- Pick a background frame by its number.
- Give the thumbnail a short hook (a few words), or let it suggest the label, title, and third line.
- Go through the checklist in Chapter 12.

09

Publish (optional) Depends on platform

It asks whether to hand off to the Content Pipeline, which writes captions, makes images, and packages everything for the platforms you choose. Just say "Yes, for Xiaohongshu and Douyin." The video, thumbnail, and transcript are passed along automatically. You press "post" yourself, because platforms don't allow AI to post on its own. See Chapter 6 for details.

04 · JUST FILL IT IN

Prompt template

No commands to memorize. Copy the template below and replace what comes after each bracket with your own request. **Delete any lines you don't need.** For anything you leave out, it will ask you or pick a sensible default.

General template

```
/aaaai-editor
[Footage]~/Movies/raw/0921.mp4            ← You can list several. Also say where
[Type]Talking-head explainer, for TikTok and Xiaohongshu          ← Talking head
[Core]The most expensive part of learning AI is the time lost on detours
[Length]Under 60 seconds
[Style]Your pick                                ← Or a style name: ink, neon, paper
[Subtitles]Bilingual Chinese/English; highlight: brand names, all numbers
[Opening]Suggest 3 lines for me to choose from                      ← Or: use th
[Edit]Cut pauses, filler words, and retakes (show me the list first)
[Intro]I'm MR ONE, AI workflows · one-person company; headshot ~/Pictures/头像/me
[Cards]When I get to "three detours," make a numbered list
[Proof]When I talk about income, use a card fold-in. Screenshots are in ~/Desktc
[Audio]Keep the music quieter; if there's fan noise, let me hear the noise reduc
[Ending]End on a comment card: comment "start" and I'll send you the link
[Aspect]Vertical 9:16
[Cover]Cover text: Don't Detour into AI
[Publish]When the edit is done, hand it to the content pipeline: one caption eac
[Other]Proper nouns: MR ONE, Claude Code
```

How to fill in each line

[Footage]

The video path. Drag the file from Finder into Claude Code and the path appears. List everything: multiple clips, photos, screenshots, logos, your own B-roll.

[Type]

Talking head, interview, or live event, plus the platforms you'll post to. The platform sets the aspect ratio, pacing, and cover size.

[Core]

The one line viewers should remember. Cards, the opening, and the cover all build around it. Writing it makes the final video more focused.

[Style]

A style name, or "your pick." The style sets the colors and fonts for cards and subtitles (Chapter 8).

[Subtitles]

Chinese / bilingual Chinese-English / original language + Chinese / none. Which words to

[Opening]

Pick the line to use as the opening teaser, or let it suggest some. "Add an opening title: …" goes

highlight. Whether subtitles should be bigger or higher.

here too.

[Edit]

Cut pauses (done by default), filler words, and flubbed takes. Say which parts to keep and which to cut.

[Intro]

Your name, your role (one line is enough), and where your headshot is. With a photo you get an avatar card; without one, a name bar. See Chapter 5 for how to prepare the photo.

[Cards]

Just describe the moment with "when I talk about…". No exact seconds needed. For common phrasing, see "Say it like this" under each component in Chapter 7.

[Proof]

Use this when you have screenshots of income, dashboards, orders, or reviews. The screenshots must be real. It won't make up data for you.

[Audio]

Which music track and how loud. Noise reduction. Whether you want sound effects, and which ones.

[Ending]

End title, call to action (comment keyword, follow, DM), and whether to hold on the card until the end.

[Publish]

Whether to also write captions and package everything after the edit: which platforms, and how many posts each. If you skip it, it will ask you when the edit is done.

[Other]

Max length, lines that must stay in, proper nouns that are easy to mishear, your account name (bottom-right of the cover).

Filled-in examples

Simplest • Start with one line

```
/aaaai-editor Edit a video for me
```

Here's what happens next: ① it asks you to drag your video into the window; ② it shows a style comparison and asks about style, music, and subtitles; ③ it checks the subtitles with you and shows you a preview. You just answer as you go. Once you're used to it, write everything at once with the General template. That saves a lot of back-and-forth.

Explainer • 60-second vertical

```
/aaaai-editor
[Footage]~/Movies/raw/ai-3-mistakes.mp4
[Type]Talking-head explainer, for TikTok and WeChat Channels
[Core]The three detours beginners take most when learning AI
[Length]Under 60 seconds
[Style]ink
[Subtitles]Bilingual Chinese/English; highlight the keyword of each "detour"
[Opening]Suggest 3 lines for me to choose from
[Edit]Cut pauses and filler words; show me a list of retakes
[Intro]I'm MR ONE, AI workflows · one-person company; headshot ~/Pictures/头像/me
[Cards]Add an opening title "Three Detours for Beginners"; show a numbered row c
      make the last punchline a quote card; show the avatar card on the line "I'
[Audio]Music focus-quiet; no sound effects
[Ending]End card: Follow me. Next time: how to pick your tools
[Cover]Suggest 3 options, 8 words max
```

Why it's written this way: explainers live or die on clear structure, so numbered row cards pin down the three key points. No sound effects keeps the tone steady.

Income proof • Three card fold-ins in a row

```
/aaaai-editor
[Footage]~/Movies/raw/week-income.mp4; screenshots in ~/Desktop/proof/ (后台.png
[Type]Results share, for Xiaohongshu and IG Reels
[Core]Shoot 3 minutes on the fly, let AI edit, get paid all week
[Style]Your pick
[Subtitles]Chinese; highlight amounts
[Opening]Use the line "I didn't edit anything this week" as the teaser
[Proof]When I talk about income, use a card fold-in with a paper background:
      first part shows the dashboard screenshot, and the moment I say the amount
      second part shows the two order screenshots side by side, then the workflo
[Audio]Music upbeat-energetic, quiet; add a "pop" when cards appear
[Ending]Hold on a call-to-action card until the end: "Want this workflow?" Comme
[Cover]A week of income, zero editing
```

Why it's written this way: proof videos fail when it's all talk. The card fold-in puts the screenshot right above you, and the stamp lands the moment you say the number. That's the most believable setup. The screenshots must be real.

Live event / guest interview

```
/aaaai-editor
[Footage]~/Movies/summit/stage.mp4 (shot horizontal); guest photo ~/Movies/summi
[Type]Event highlights, for YouTube Shorts and LinkedIn
[Length]Under 90 seconds; keep only the guest's three best moments
[Style]trust
[Subtitles]Original language (English) + Chinese translation
[Edit]There's audience reaction, so use standard noise reduction. Don't wipe out
[Cards]Add an avatar card when the guest first appears (name, title); use a cour
      separate the three parts with chapter breaks
[Aspect]Crop to vertical 9:16, keep the speaker centered
[Ending]End card: Full talk on my profile
```

Why it's written this way: event footage is often shot horizontal, so say up front that you want a vertical crop. With audience reaction, use standard noise reduction. The strong setting will wipe out the audience too.

One-line shortcut

```
/aaaai-editor Edit ~/Movies/raw/0921.mp4, same as last time
```

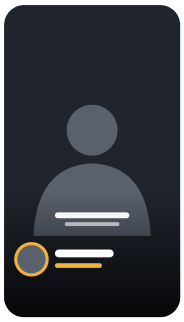

"Same as last time" means reuse the style, music, and subtitle settings from your last video. It will ask about other details along the way. On your first video, replace "same as last time" with "make it a 60-second vertical with Chinese subtitles."

TIP Describe moments with "when I talk about…" or "the last line." It lines them up using the subtitle timing. Only give seconds when you need precision (seconds in the final video, not the raw footage).

05 · INTRODUCE YOURSELF

Introduce yourself: name and headshot

The first time new viewers see you, they need to know who you are and why they should listen. The moment you say "Hi, I'm…", show a card with your name and role. With a photo, use an avatar card. Without one, use a name bar.

Avatar card `avatar`

Photo needed

WHAT IT LOOKS LIKE

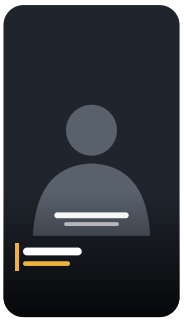

A round photo in the bottom-left (ringed in the style's accent color) + your name + one line about who you are.

GOOD FOR

Introducing yourself; a guest's first appearance; mentioning a well-known person or partner (swap in their photo).

SAY IT LIKE THIS

"Show the avatar card on the line "I'm MR ONE." Headshot ~/Pictures/头像/me.jpg, role: AI workflows · one-person company"

Name bar `speaker`

WHAT IT LOOKS LIKE

Along the bottom edge: a short accent-color bar + your name in bold + one line about who you are. Slides in from the left.

GOOD FOR

When you don't have a good photo, or your face is already on screen.

SAY IT LIKE THIS

"Add a name bar when I introduce myself: MR ONE, AI workflows"

How to prepare your headshot

Clear face, good light

A headshot or waist-up shot both work. Face the camera or turn slightly. Skip reflective sunglasses.

Square is best

Vertical or horizontal is fine too. It's auto-cropped to a square, then a circle, keeping the upper part by default (that's usually where your face is).

At least 500×500

Small images get blurry when enlarged. An original phone photo is plenty.

JPG, PNG, or HEIC

No need to convert iPhone photos (HEIC). A simple background looks cleaner inside the circle.

Where to put the photo

A

Keep it in one place

For example, "Pictures › 头像 (headshot) › me.jpg". Then use the same photo for every video. That's the easiest way.

B

Tell it where it is

Put the path in [Intro] in your prompt, or just drag the photo into the Claude Code input box (the path appears automatically). It copies the photo into the project's `assets` folder. Your original stays untouched.

```
[Intro] I'm MR ONE, AI workflows · one-person company; headshot ~/Pictures/头像/me.jpg
```

C

Check the preview and fine-tune

Once the preview is ready, look at the avatar card frame. If something's off, just say so:

YOU WANT	SAY IT LIKE THIS
Face sits too low in the circle / gets cut off	`Move the headshot framing up a bit` (or "down a bit")
Photo is too small	`Make the headshot bigger`
Move it to the right	`Put the avatar card in the bottom-right`
Shows too long / too early	`Bring the avatar card in one second later and hold it for three seconds`
Make it stand out more	`Add a focus frame around the avatar card when it appears`
Role is too long and wraps	`Change the role to "AI workflows"`

TIP The avatar card appears right when you say your name and stays for 3–4 seconds. One intro per video is usually enough. For a series, you can show it every episode so viewers remember you.

Guests Interviews and event videos work the same way: "Add an avatar card when the guest first appears, photo ~/Desktop/guest.jpg, name Alex Chen, role: Founder of Example Co."

06 · PUBLISH

Captions and posting: the content pipeline

Once the video is cut, the next question is what to write and which images to use. The suite's **social-content-pipeline** takes the platforms you name and bundles your video, cover, and captions into a ready-to-post pack. You just open the platform, paste, and hit Post.

The five things it does

01

Gather info

It pulls facts from your transcript first. Then it checks recent news, what similar accounts are posting, and any trends worth riding.

02

Find the angle

It picks the hook, the target audience (a specific group of people), and the tone.

03

Write per platform

Each platform gets its own post-ready caption, with length and hashtags that follow that platform's norms. Numbers and facts come from your content. Nothing is made up.

04

Add visuals

If Canva is connected, it can make images there (it asks first). Without Canva it still delivers: it uses the cover aaaai-editor made, or gives you a clear image brief. Short-video platforms just use the finished video.

05

Pack and archive

Every post comes with its text plus where the image or video goes. It also saves a copy to an archive, so it won't repeat topics next time.

Two ways to start

A · RIGHT AFTER THE EDIT (MOST COMMON)

- After delivering the video, it asks: "Want to hand this to the content pipeline?"
- You reply: "Yes, one post each for Xiaohongshu and Douyin."
- The video, cover, transcript, and style carry over automatically. No need to send them again.

B · ON ITS OWN (YOU ALREADY HAVE A VIDEO, OR JUST NEED CAPTIONS)

- Start with one of the fixed openers: `启动内容生产线：`, `/content-pipeline`, or `content pipeline:`.
- Only these three openers start it. Saying "write me a tweet" just gets you one caption, not the full process.

Content pipeline template

```
content pipeline:
[Topic] The most expensive part of learning AI is the time lost on detours
[Client] MR ONE (my own account)                ← one brand profile per account/
[Platforms] Xiaohongshu, Douyin, X                ← pick as many as you like
[Count] 1 post per platform
[Assets] Video ~/Movies/aaaai-editor/成品/20260921-example-cut.mp4; cover is in
[Goal] Drive sign-ups for the 9/24 AI beginners' session
[Tone] Relaxed and direct, no salesy voice
[Must include] Session date; comment "start" to get the link
[Avoid] Hype slang; exaggerated earnings claims
[Language] Simplified Chinese for Xiaohongshu and Douyin; English for X
```

When you come straight from an edit, [Assets] is filled in for you. Fill in the other lines as needed. The first time you use a new [Client], it asks four questions to build a brand profile (see below), then reuses it from then on. (成品 = the "finished videos" folder.)

What the posts look like

PLATFORM	CAPTION	VISUAL	HASHTAGS/TOPICS
Xiaohongshu (RED)	Title under 20 characters + body in short paragraphs (under 1,000 characters)	3:4 cover image (big title over the image)	`#topic#` at the end
Douyin/WeChat Channels	One or two lines of description	9:16 video	`#topic`
TikTok/YouTube Shorts	Open with a hook; Shorts titles under 100 characters	9:16 video	hashtag
Instagram posts/Reels	The first 125 characters are what people see before "more"	4:5 post or 9:16 Reels	End of caption or first comment
X	280 characters per post; longer content becomes a thread	16:9 or 1:1; video can be 9:16	0–2

PLATFORM	CAPTION	VISUAL	HASHTAGS/TOPICS
Bilibili	Title under 80 characters + description (highlights and timestamps)	16:9 landscape + cover	Filled in separately on the upload page

TIP By default each post gets at most 5 hashtags, only the most useful ones. Platform rules change often, so take one more look on the platform before posting.

Brand profiles: it remembers each account's style

Asks 4 things the first time

Main colors and visual style, tone (professional, casual, suspenseful…), banned words and required disclaimers, and output language.

Saved on your own computer

`Documents › brand-profiles › ClientName.md`. It's a plain text file, and you can edit it yourself.

Separate for each account

One for each client, company, or personal account, so styles never mix.

Every output is archived

`Documents › content-history › ClientName`. Next time, it avoids topics you've already covered.

What it won't do ① **Post automatically.** Platforms don't let AI publish on its own, so the last tap is yours. ② **Make a video from scratch.** To edit a video, use aaaai-editor, then hand the result over for packaging.

Canva is optional Once you connect Canva in Claude, it asks before making images. Without Canva, it uses aaaai-editor's covers (vertical 1080×1920 and 1080×1350, landscape 1920×1080), or writes an image brief covering the scene, layout, colors, and size.

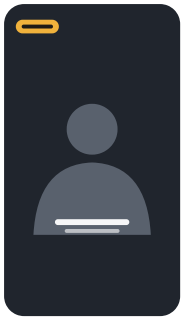

07 · GALLERY

Widget gallery

Each small preview on the left is a 9:16 vertical mockup: the `gray figure` is you, the white line is the caption (about 70% down the frame), and yellow is the accent color. You can copy the "Say this" lines straight into your prompt.

Openers and endings

The first 3 seconds decide if viewers stay; the ending decides if they act

Opening teaser hook

WHAT IT LOOKS LIKE

Copies the strongest line in the video to the very start, and keeps it in its original spot too (or moves the whole line).

WHEN TO USE

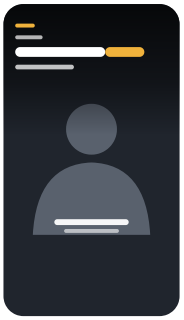

Worth trying on every short video, especially ones with a flat start.

SAY THIS

“Use the “…” line as the opening teaser; or: suggest 3 lines that would make good openers”

TIP

It trims the cut points to the actual voice, then transcribes again to make sure the line is complete.

Opening title hook

WHAT IT LOOKS LIKE

Gradient scrim at the top + small tag + big title, keywords in the accent color, with a gentle push-in as it lands.

WHEN TO USE

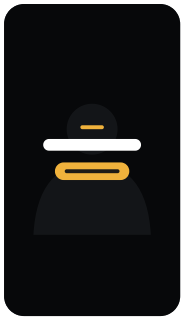

For new viewers, when you need one line that sums up the topic.

SAY THIS

“Add an opening title “The **three detours** for beginners””

TIP

Keep titles to two lines max. Words wrapped in **double asterisks** turn the accent color.

Ending card `outro`

WHAT IT LOOKS LIKE

Darkened frame (you're still visible) + big centered title + button-style tag; sound and picture fade out together.

WHEN TO USE

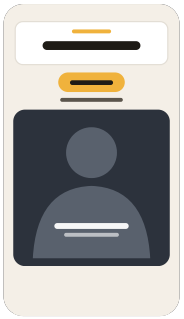

Regular endings: follow me, next episode teaser.

SAY THIS

"Ending: follow me, next time I'll cover tools"

TIP

Want it fully black? Say "ending full black".

Call-to-action card `cta`

WHAT IT LOOKS LIKE

A question on a white card (keyword highlighted) → a comment box rises, the keyword types out letter by letter, the cursor blinks, the send button lights up → one line of small text. Can hold until the end.

WHEN TO USE

When you want comments, or DMs to claim a freebie. Often paired with a card takeover.

SAY THIS

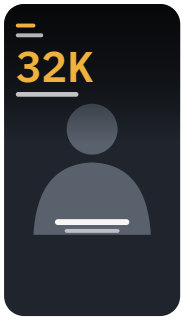

"End on the comment card: Want the same setup? Comment "EDIT" and I'll send it"

TIP

Typing starts the moment you say the keyword. Short keywords of a word or two look best.

Key points

One idea per card; at most one main card every 8–15 seconds

Number count-up `stat_hit`

WHAT IT LOOKS LIKE

A big number counts from a start value to the end value (prefix/suffix optional), with a gentle push-in as it lands.

WHEN TO USE

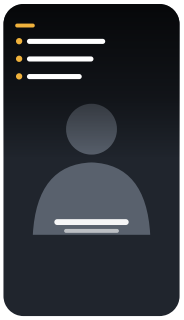

When you say a key number: followers, revenue, days, percentages.

SAY THIS

"Do a count-up when I say 32K followers"

TIP

Numbers use a monospace font, so they don't wobble while counting.

List `steps`

WHAT IT LOOKS LIKE

Points appear one by one at the top, each timed to the second you say it.

WHEN TO USE

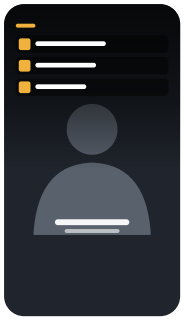

Listing 2–4 things.

SAY THIS

"Make a list for the three steps, each one appearing when I say it"

TIP

Keep it to 3–4 items, one line each. Longer ones will cover your face.

Numbered rows

`steps · rows`

WHAT IT LOOKS LIKE

One small card per item, with a numbered accent-color square on the left. Feels more like "first, second" than a list.

WHEN TO USE

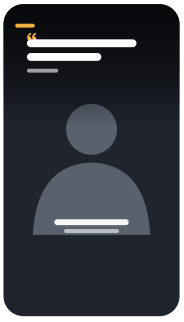

When you say "first, second, third".

SAY THIS

"Use numbered rows for the three detours"

TIP

Keep the text as short as you can.

Pull quote `quote_pull`

WHAT IT LOOKS LIKE

Quote mark + one line + source. Fades in with a slow push-in the whole time.

WHEN TO USE

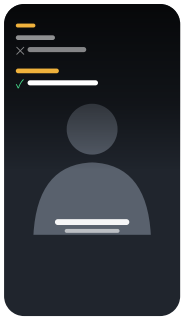

A line worth screenshotting and sharing.

SAY THIS

"Make "the most expensive thing is time spent on detours" a quote card"

TIP

One or two per video is plenty.

Comparison `compare`

WHAT IT LOOKS LIKE

Two groups, top and bottom: the first faded with an X (what you thought / before), the second in accent color with a check (what's true / now), appearing a beat later.

WHEN TO USE

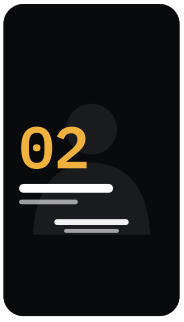

Busting a myth, before vs. after.

SAY THIS

"Compare: you think the subscription is the biggest cost, but really it's time spent on detours"

TIP

On vertical video, top-and-bottom reads better than side by side.

Chapter break `chapter`

WHAT IT LOOKS LIKE

The whole frame darkens for 1–2 seconds + big chapter number + title. You're still visible.

WHEN TO USE

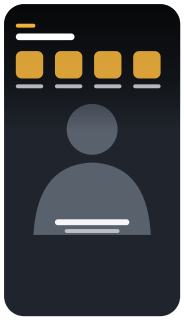

When the video really has sections (long videos, three-part structure).

SAY THIS

"Add a chapter break between each section"

TIP

3–4 per video max.

Icon grid `icons`

WHAT IT LOOKS LIKE

A row of icons + labels. Good for listing tools, platforms or features.

WHEN TO USE

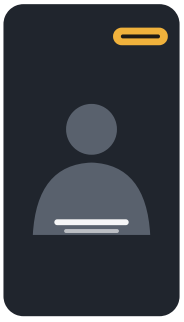

When you say "here are the tools I used".

SAY THIS

"Do an icon grid when I talk about my tools: microphone, camera, rocket"

TIP

41 built-in icons. Say the name or just what you mean.

Stamp / callout `callout`

WHAT IT LOOKS LIKE

A small pill tag (icon optional) that pops in.

WHEN TO USE

Highlighting a small point: NEW, save 80%, limited time.

SAY THIS

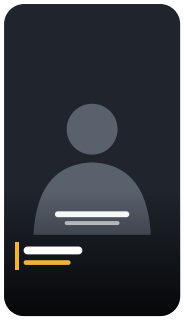

"Add a "save 80% time" callout in the top right"

TIP

Stamps always sit on top of other cards, so they never get covered.

Show who, without blocking

Let viewers know who's talking, without covering your face

Name bar `speaker`

WHAT IT LOOKS LIKE

Along the bottom: accent-color vertical line + name + title.

WHEN TO USE

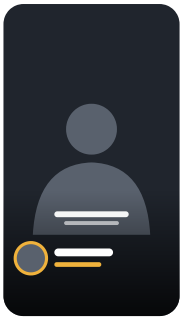

Self-intros, or when a guest first appears.

SAY THIS

"Add a name bar during my intro: MR ONE, AI workflows"

TIP

Keep the title short.

Avatar badge `avatar`

Needs photo

WHAT IT LOOKS LIKE

Round photo (accent-color ring) + name + role. Easier to recognize than plain text.

WHEN TO USE

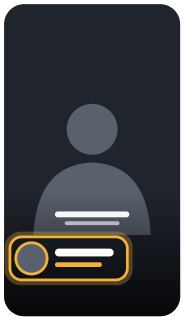

When you mention someone, a guest or a famous quote.

SAY THIS

"Add an avatar badge when I mention Alex, photo assets/alex.jpg"

TIP

Put photos in the project's assets/. You can set the crop center.

Glow frame `glow`

WHAT IT LOOKS LIKE

A gold glowing frame that pulses gently around an area.

WHEN TO USE

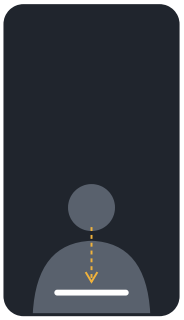

Reminding people to follow, pointing at a button, framing an avatar badge.

SAY THIS

"Add a glow frame around the avatar badge when it appears"

TIP

It figures out the position. To choose it yourself, say what to frame.

Captions avoid face `auto`

Needs background removal

WHAT IT LOOKS LIKE

If you sit low and your face lands where captions go, those lines move below your chin. Cards that would cover your eyes move out of the way too.

WHEN TO USE

On by default.

SAY THIS

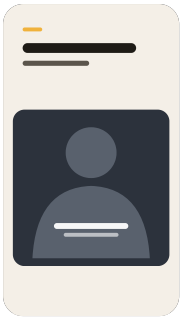

"Don't move captions away from my face (usually not needed)"

TIP

Needs background removal. Without it, captions stay put.

Show proof: card takeover

The video shrinks into a card with proof above it — the most convincing way to show earnings or results

Card takeover `takeover` Needs background removal

WHAT IT LOOKS LIKE

The video shrinks into a rounded frame at the bottom, with your head breaking out of the top edge. The background can be a blurred frame or paper. A title or panel area sits on top.

WHEN TO USE

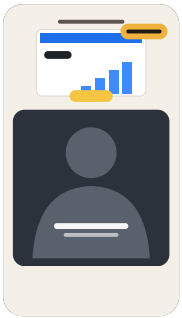

Key moments, showing proof, holding at the end. 2–3 per video.

SAY THIS

"Use a card takeover here with a paper background; hold the last one until the end"

TIP

Head breakout needs background removal. If you sit too low, your head won't break out. That's normal.

Proof screenshot card

`proof` Needs screenshot

WHAT IT LOOKS LIKE

Rounded screenshot in a white frame + small heading above + yellow date pill at the bottom + amount stamp in the top right. Two can sit side by side.

WHEN TO USE

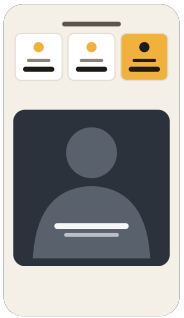

Dashboard data, orders, revenue, reviews, chat screenshots.

SAY THIS

"Show the dashboard screenshot, stamp "+$1,593" when I say 1,593, and add a coin sound"

TIP

Screenshots must be real. Very tall screenshots shrink to fit.

Workflow steps card `flow`

WHAT IT LOOKS LIKE

A row of small cards (icon + small text + bold text). Each step appears on its line, and the last one is the accent-color "result".

WHEN TO USE

Explaining your process: shoot → edit → earn.

SAY THIS

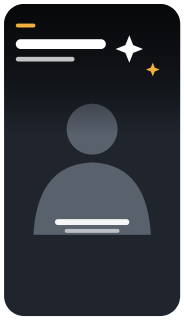

"Make a workflow: shoot 3 minutes → AI edits it → money every week"

TIP

3 steps looks best, 4 max.

Mood and pacing

Nice extras — a little goes a long way

Float and sparkle `auto`

WHAT IT LOOKS LIKE

Cards float gently up and down after landing. Titles, numbers, quotes and endings sparkle once or twice on the accent color.

WHEN TO USE

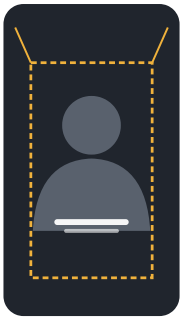

On by default.

SAY THIS

"Cards don't float / no sparkle"

TIP

Don't want it? Just say so to turn it off.

Push-in `zooms`

WHAT IT LOOKS LIKE

A slow push (build-up) or a punch-in (punchline, number reveal), like switching camera angles.

WHEN TO USE

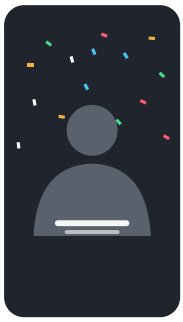

Punchlines, quotes, number reveals. At most 3 punch-ins per minute.

SAY THIS

"Punch in the moment I state the conclusion"

TIP

If the camera is too far away, it can push in on the whole video. It shows you a comparison so you can pick the zoom.

Confetti popper `confetti`

WHAT IT LOOKS LIKE

Colored confetti bursts from the lower middle, spinning as it falls.

WHEN TO USE

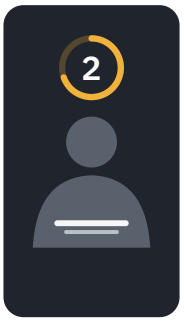

Hitting a milestone, sharing good news.

SAY THIS

"Pop confetti when I say we passed 100K followers, with a popper sound"

TIP

Once per video is enough.

Ring countdown `countdown`

WHAT IT LOOKS LIKE

A ring shrinks each second + a big number in the middle, with a tick every second. Sits above your head by default.

WHEN TO USE

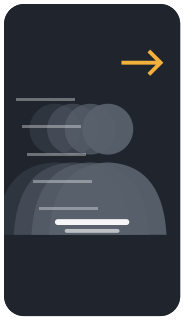

"Three, two, one" , suspense before a reveal.

SAY THIS

"Do a 3-second countdown before the reveal"

TIP

You can turn off the ticks.

Whip transition

`transitions · whip`

WHAT IT LOOKS LIKE

About 0.3 seconds around a section cut: the frame zooms, whips sideways and back with motion blur, plus an automatic “whoosh”. Captions and cards aren't affected.

WHEN TO USE

When you really change topics or move to the next section.

SAY THIS

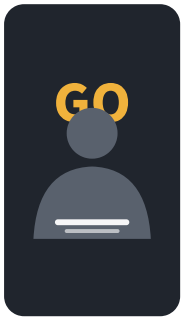

“Add a whip transition when I finish the first detour and start the second”

TIP

Only added when you ask. Auto-editing never uses it. Video length doesn't change.

Visual tricks

Add depth to the frame

Text behind subject

`behind_subject`

`Needs background removal`

WHAT IT LOOKS LIKE

Big text sits behind you, and you stand in front of it.

WHEN TO USE

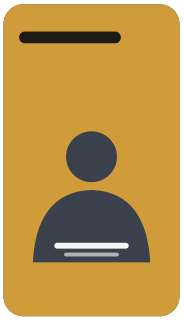

Opening titles when you're centered with room above your head.

SAY THIS

“Make the opening title text-behind-subject, with the text behind me”

TIP

Needs background removal.

Subject cutout `cutout`

`Needs background removal`

WHAT IT LOOKS LIKE

Cuts you out of the frame and places you on a different background or color.

WHEN TO USE

For a poster look, or to swap the background.

SAY THIS

“Cut me out for these few seconds and put me on the accent-color background”

TIP

Needs background removal.

Full-screen B-roll `broll`

Needs footage

WHAT IT LOOKS LIKE

Inserted footage fills the screen while your voice keeps going. Captions move up to the upper middle.

WHEN TO USE

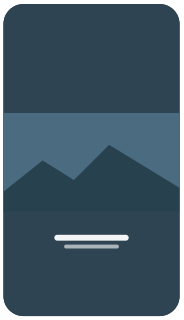

When you mention something visual: a product screen, a location, an object.

SAY THIS

"Insert assets/cafe.mp4 when I mention the coffee shop, starting at 3 seconds"

TIP

Your own footage is best. It can also find free footage or generate it with AI (quote first).

B-roll blurred fill / letterbox

`broll · blur / letterbox`

WHAT IT LOOKS LIKE

Landscape footage in a vertical video: fill the top and bottom with a blurred copy, or leave black bars.

WHEN TO USE

Inserting landscape footage or screen recordings.

SAY THIS

"Use a blurred fill for this landscape clip"

TIP

Images get a slow automatic push-in, so they never look static.

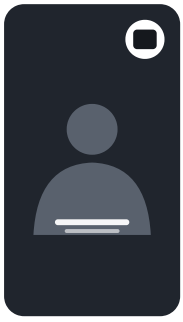

Image / logo `image`

WHAT IT LOOKS LIKE

Places an image or logo. Black logos can sit on a white circle.

WHEN TO USE

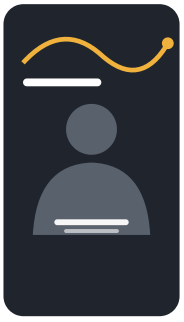

Brand exposure, partner logos, product shots.

SAY THIS

"Put assets/logo.png in the top right on a white circle"

TIP

Transparent PNGs work best.

Transparent animation clip

`clip`

WHAT IT LOOKS LIKE

Overlays an animation with a transparent background (like a brand animation).

WHEN TO USE

For complex motion. The motion skill makes it, then it gets overlaid.

SAY THIS

"Have the motion side make a logo animation and overlay it at the start"

TIP

See motion-graphic-video-editor in the suite for how.

Styles at a glance

A style sets the colors, fonts, and texture of your cards and captions. When you start, you'll get a side-by-side comparison image. Say a style's name to switch, and nothing else needs redoing. The first 7 are general styles, so pick by content. The last two are **community styles**. You can use them, but they carry the MR ONE and OTG brand look, so they're usually not a good main style for your own channel.

ink

Business, education: ink background, off-white text, amber accent. Steady and goes with anything.

neon

Web3, tech: near-black background, teal accent, thin outlines.

gold

Finance, crypto: slate background, gold for trust.

trust

Wealth, institutions: deep navy background, trust blue, profit green.

paper

Editorial, print feel: off-white background, dark ink text, vermilion accent.

mag

Magazine, commentary: pure white cards, near-black text, magenta accent.

serif

Paper serif: warm cream background, serif titles, ochre-red accent.

mrone · community

MR ONE black and gold: bold white titles, golden-yellow keywords and number squares. Community style, © MR ONE.

otg · community

OTG rocket style: OTG red, frosted glass, starfield chapter breaks, laser sweeps. Community style, © OTG community.

TIP Caption keyword colors follow the style's accent color. To pick your own, say "Use #FF5C7A for caption highlights." If you have brand colors, you can turn them into a custom style too.

Music and sound effects

Everything is original, so there are **no copyright issues**. Music ducks automatically under your voice. Sound effects are mixed in before loudness is locked, so the final loudness stays accurate. Sound effects are off by default. 3 to 6 per minute is plenty; more gets noisy.

7 built-in music tracks

NAME	TEMPO	FEEL	GOOD FOR
`focus-quiet`	76 BPM	Quiet and focused, almost no drums	Tutorials, dense info
`warm-story`	80 BPM	Warm storytelling, medium pace	Behind the scenes, personal stories
`upbeat-energetic`	96 BPM	Bright and upbeat, busiest drums	Announcements, showing results
`chill-tropical`	84 BPM	Tropical chill with a groove	Outdoors, digital nomads
`lounge-vacation`	70 BPM	Lazy vacation vibe with vibraphone	Laid-back, relaxing
`late-night-chill`	68 BPM	Late-night mood, slow and moody	Night shoots, reflection
`minimal-intimate`	66 BPM	Minimal and quiet, no kick drum	Serious topics, monologues

Want more music? The HeyGen music library

The suite also includes HeyGen's HyperFrames. It can search the **HeyGen music library (10,000+ tracks)** from a description, download a track into your project, and mix it in as usual (still ducking under your voice and locking loudness).

FIRST TIME: SIGN IN ONCE

AFTER THAT, SAY

- Install HeyGen's command-line tool in the Terminal app (follow HeyGen's official instructions).
- Run `heygen auth login --oauth` and sign in with your HeyGen account. This uses the free tier.
- Not sure how? Tell Claude "Help me set up the HeyGen music library." It walks you through each step. You do the sign-in yourself.

- "Find an upbeat lo-fi track from the HeyGen music library that won't compete with my voice."
- "Give me three tracks to preview, similar in pace to upbeat-energetic."
- "Use HeyGen to find a 'whoosh' sound for a transition."

Note Tracks from the HeyGen music library are licensed under HeyGen's terms of use. Before commercial use (ads, client projects), check that track's license on HeyGen. The 7 built-in tracks and 7 sound effects are original and safe to use in your own videos.

7 sound effects

NAME	SOUNDS LIKE	USE FOR	SAY THIS
`coin`	Cha-ching, coins	Amounts, number reveals	Add a coin sound when I say the amount
`pop`	Pop	Cards popping in, list items appearing	Add a “pop” when the card appears
`ding`	Ding	Conclusions, key points, tips	Ding when I state the conclusion
`whoosh`	Whoosh	Transitions, card takeover entrances	Add a whoosh going into the card
`click`	Click	Buttons, checkmarks	Add a click on the checkmark
`tick`	Tick	Each second of a countdown	Add ticks to the countdown (on by default)
`confetti`	Popper	Celebrations, milestones	Add a popper sound with the confetti

Want to change something? Say this

No change means starting over. The transcript, person mask, and card images are all cached, so a new preview usually takes 30 seconds to a minute.

YOU WANT	SAY THIS
A caption has a typo or wrong English	`At 12s change “Hanzhou” to “Hangzhou”; change the English to …`
Captions too small / too low	`Make captions bigger; move captions up a bit`
Switch styles	`Switch to the neon style`
Too many cards, too crowded	`Remove the card at 20s; use fewer cards`
A card covers my face	`Move that card down / right a bit; or: don't cover my face`
A card shows too long / too early	`Show the list one second later; shorten the stat card to two seconds`
Music too loud	`Turn the music down (or: try the second music version)`
Background noise	`Let me hear the noise reduction first; use stronger noise reduction`
Add / remove sound effects	`Add a coin sound when the number appears; remove all sound effects`
Cuts too choppy / too slow	`Leave longer pauses; cut this whole section`
Opening isn't gripping	`Use a different line as the opening teaser; suggest a few lines`
Ending too abrupt	`Add an ending card; make the final fade-out slower`

YOU WANT	SAY THIS
Change cover background	`Use frame 5 for the cover; show me cover options`
Cover title line breaks	`Put the title on one line; break the title after “editing”`
Cover text	`Change the small label to “Solo business · Productivity”; change line three to …; make the title white; center the text`
Want rhythm between sections	`Add a whip transition going into the next section`
I look too small, camera too far	`Push in on the whole video a bit (it shows a comparison so you can choose)`
Check it on my phone first	`Make a phone preview (under 30 MB, not the final)`
I want the final video	`Render the final and make the cover`
Write the post copy	`Hand it to the content pipeline, one post each for Xiaohongshu and Douyin`

11 · VISUAL EDITOR

Studio: hands-on editing

Want to drag and tweak things yourself, like in an editing app? Say "**open the editor**" in the chat. Studio opens next to Claude: preview on the left, properties and tools on the right, and a multi-track timeline below. Every change saves to the edit sheet automatically. Changes you ask Claude for in the chat sync over too, and neither side overwrites the other. Only your own computer can open it.

TO DO THIS	IN STUDIO
Change a card's text or numbers	Click the card in the preview or on the timeline, then edit it in "Inspect" on the right.

TO DO THIS	IN STUDIO
Move or resize	When paused, the card switches to how the engine really draws it. Drag the box to move it, and drag the gold square at the bottom-right to resize. `Alt` + arrow keys nudge it. "Reset to default position" on the right puts it back where the style places it.
Change when it appears	On the timeline, drag the middle to move it and drag the ends to change its length. It snaps to the playhead and other blocks.
Add cards, zoom-ins, confetti, sound effects	Use "+ Card" and "+ Effect" below. They're added at the playhead. Select one and press `Delete` to remove it.
Cut a sentence	Press ✕ in "Script" to cut that part. Later cards move up automatically. Struck-through sentences can be restored.
Clean up flubs, pick the opening	Above "Script," use "Find flubs/retakes" and "Suggest opening hook." Check a box or click once to apply.
Make sure nothing covers faces or gets hidden	Toolbar buttons "Safe area," "Face," and "Platform" (rough button positions for Douyin, Reels, Shorts, and Xiaohongshu). "Check" marks problems with red dots.
Change caption style, music, noise reduction	"Setup": caption style and height, music and volume, noise reduction, loudness, end fade-out.
Add your own images or videos	"Media": drag files in and they go into the project's assets/. Images can go on screen, videos work as B-roll, and audio works as music.
Trim cut points	On the timeline's "Video" track, drag a clip's ends to change its in/out points in the source. `S` splits at the playhead; select the extra piece and press `Delete`. With a clip selected, you can "Preview in/out point" (2 seconds before and after).
Edit several at once	Shift/⌘-click cards on the timeline to add them to the selection. Drag the group together, and change entrance animation, sound effect, and size all at once on the right.
Edit all captions together	"Script" → "Batch captions": find and replace, highlight a word in every sentence, or shift all captions earlier/later.

TO DO THIS	IN STUDIO
Make a cover or card images	"Cover": play to a frame you like and press "Use playhead frame," type a title, and press "Make cover." Check cards and press "Export card images."
Preview music or noise reduction	In "Setup," pick a track or level and press "Preview 8 sec." It's the real mix and won't change your video.
Camera too far away	"Setup" → "Framing": zoom to 1.15–1.25 to push in on the whole video.
Go back to an earlier version	Top right "…" → "Version history": every save is kept (the last 100). Click "Restore this version."
Ask Claude to fix a spot	Play to that spot (or select that card) and press "+ Note" (`N`), then check "Ask Claude to handle this." In the chat, say "check the Studio notes." Claude fixes each one and replies on the "Notes" tab. Notes can also just be reminders for yourself.
Choose a style	Top right "Style overview": the same card on the same frame in every style, side by side. Click one to switch.
Export several sizes at once	When you "Export," check 4:5 and 1:1 (landscape videos also get 16:9…). Each is saved as out/final_WIDTHxHEIGHT.mp4, and the finished-video folder name includes the size, so your main version is never overwritten.
Channel rules	"Check" uses your channel profile to check length, cover, captions, and more, and lists your editing rules (you can write your own in `studio-checks.json`).
Bring in a video made elsewhere	On the project home page, use "+ Import video": pick the video and name it. It creates a new project, copies the source, and transcribes it. Then add captions, a cover, and export as usual.
Change how a card exits, or its colors	Select the card. Under "Exit animation" on the right, choose drop, float up, slide out left, slide out right, or just disappear. "Color" changes this card's accent, text, and background colors.
Make a card move	Select the card → "Motion path" → "Make it move." Move the playhead to a time, then drag the card on screen to set its position at that time (this adds a keyframe if there isn't one). It glides smoothly between points.

TO DO THIS	IN STUDIO
Speed up or slow down	Select a clip on the timeline's "Video" track, then pick 0.5× to 3× under "Speed for this clip" on the right (audio changes too, pitch stays the same). For just part of it, press `S` to split first. Cards adjust automatically.
Hide license plates or personal info	"+ Effect" → "Blur" or "Mosaic." Drag a box over the area on screen, drag the bottom-right corner to resize, and set the time range on the timeline.
Fade music in and out	"Setup" → music fade-in/fade-out seconds, which second of the track to start from, and when to end it in the video.
See the real final look	"Render this section" shows the final frames for that part in a few seconds. When you're happy, press "Export."
Switch to the English interface	Use the "中／EN" toggle at the top right (also on the project home page). Your own content, like captions, card text, and notes, isn't translated. Your choice is remembered.

Keyboard shortcuts

KEY	ACTION
`Space`	Play/pause
`← →`	Back/forward one frame (add Shift for one second)
`⌘Z` ／ `⇧⌘Z`	Undo/redo (Windows: Ctrl+Z/Ctrl+Y)
`Delete`	Delete the selected card or effect; with a caption selected, cut that sentence
`R`	Render this section
`G`	Toggle safe area
`S`	Split the video at the playhead
`N`	Add a note at the playhead
Shift/⌘ + click	Select multiple cards and effects
`?`	Shortcut list, replay the tour, diagnostic report

FAQ

SITUATION	WHAT TO DO
Cards in the preview don't quite match the final video	During playback you see an approximation. Pause for half a second and it switches to the engine's real look. For animations, transitions, and combo cards, press "Render this section."
A message says "The edit sheet was changed elsewhere"	You and Claude in the chat edited the same edit sheet at the same time. Choose "Load latest version," then press "Undo" once to get your changes back. Nothing is ever silently overwritten.
Project is marked "Read-only"	The source video is missing (moved or renamed). Put it back where it was, reopen the project, and you can edit again.
Something in the interface breaks	Top right "…" → "Diagnostic report" → copy, then paste it to Claude. The report doesn't include your videos or keys.

12 · LOCATIONS

Where your files are

WHAT	WHERE	NOTES
Finished videos (easiest to find)	`Movies › aaaai-editor › 成品` (finished) Windows: Videos › aaaai-editor › 成品	After every final render and cover, a copy lands here, named after the project. Find it under "Movies" in the Finder sidebar ("Videos" in Windows File Explorer).
Project folder	`Movies › aaaai-editor › date-topic`	One folder per video.
Final video	`project › out › final.mp4`	The only version to deliver (the master).
Preview	`project › out › final_preview.mp4`	Half resolution. For checking layout only. Not the finished video.
Covers	`project › out › cover_*.png`	Two vertical sizes. Landscape videos also get a 16:9 one.

WHAT	WHERE	NOTES
Images for the project	`project › assets`	Photos, screenshots, logos, your own B-roll. They can live elsewhere too. Just tell it the path.
Edit decisions	`project › storyboard.json`	Every decision is saved here (cuts, cards, music). Go back, change things and re-render anytime.
Caption track	`project › work › captions.json`	Your hand-edited captions. Delete it to go back to auto captions.

Relax Your original footage is never deleted, moved or overwritten. You can change where finished videos go. Just say "save finished videos to ~/Desktop/finished".

13 · FINAL CHECK

Check before you post

It checks its own work before rendering, but your name goes on the post. Take two minutes for one more look. Your checkmarks are saved only in this computer's browser.

- [ ] **No typos in the captions**
  Especially names, brands, numbers and English.
- [ ] **No card covers your face or runs off the frame**
  Check frames from the final, not just the preview.
- [ ] **Something grabs attention in the first 3 seconds**
  A teaser line, opening title or on-screen action.
- [ ] **Voice is clear and music doesn't drown it out**
  Listen to the start and end once with headphones.

- [ ] **Screenshots and numbers are real**
  Proof should hold up to questions.
- [ ] **The ending has a clear next step**
  Follow, comment a keyword, or visit your profile.
- [ ] **Cover text is in the safe zone and off your face**
  Still visible after the profile grid crops it.
- [ ] **You're posting final.mp4**
  Not final_preview.mp4.

14 · FAQ

FAQ

What's the difference between the preview and the final? +

Why does the first render take longer? +

Will it delete or change my original footage? +

Do I have to pay? +

Are my API keys safe? +

What if my footage is landscape? +

What does “same as last time” reuse? +

Why didn't my head break out of the card frame? +

Why do captions sometimes move lower? +

Can I use my own music? +

Can it edit English videos? +

What about explainers or animations with no people on camera? +

15 · GOOD HABITS

Habits for consistent videos

1 Lock captions first, then place cards
Card timing follows the captions. Change captions later and the cards may need to move too.

2 One idea per card
Fewer cards is better. At most one main card every 8–15 seconds. For videos under 30 seconds: opener + one main card + ending.

3 Leave room when you shoot
Sit in the middle of the frame with a little space above your head. Cards, text-behind-subject and card takeovers all look better.

4 Tell it proper nouns up front
Put brand names, people's names and coin names under [Other]. That fixes most typos.

5 A preview is not the final
The final video is `final.mp4`, and you only get it when you say "render the final". Previews are for layout only.

6 Same series, same settings
Say "same as last time" to reuse the last video's settings. That keeps style and volume consistent across episodes.

7 Use real proof
Earnings, dashboard and order screenshots must be real. It only handles layout. It won't make up numbers for you.

8 It asks before spending money
AI-generated B-roll always comes with a quote first. Decide after you see it. If you say no, nothing is spent.

Copyright and licensing

aaaai-editor is free for you to use. The videos, covers and captions you make with it are yours, including for commercial use. The items below have their own rights holders:

CONTENT	RIGHTS HOLDER	YOU MAY
The aaaai-editor suite itself (code, styles, cards, recipes, icons, docs, built-in music and sound effects)	© aaaai.ai	Install and use it for free, and modify it for yourself. Don't resell, give away, publicly distribute or repackage it as your own product.
`mrone` style and caption style (community style)	© MR ONE	Free to use. The brand belongs to MR ONE. Don't use it to pose as MR ONE.
`otg` style and caption style (community style: OTG name, colors, brand elements)	© OTG community	Free to use. The brand belongs to the OTG community. Don't use it to pose as OTG.
The videos, covers and captions you make with it	You	Any use, including commercial.
HeyGen music library, Pexels footage, AI-generated B-roll	Each service provider	Use under each provider's terms. Pexels footage needs credit to Pexels and the photographer (it builds the credit list for you).

Community styles `mrone` and `otg` are the brand styles of two channels/communities. You can use them, but the names, colors and brand elements belong to their owners. Don't use them to pose as that brand or to make content look official. Full terms are in `LICENSE.md` in the suite.
